***Course Pre-Requisites / Co-Requisites***

Fundamentals of structural analysis including loads, shear and moment diagrams, and classical methods for determining displacements. Behavior and design of reinforced concrete members subjected to flexure, shear, and compression.

***Course Objectives***

This course is aimed at addressing the behavior of reinforced concrete (RC) structures beyond what is typically taught in reinforced concrete design courses. It will address as many of the following topics, as time permits (some changes might be expected, depending on students' research interests/activities):

1. Introduction and philosophy for structural systems behavior and performance.
2. Available technical resources.
3. Loading sources (e.g., static, seismic, wind, blast, impact, etc.), and load characterization.
4. Material behavior for RC structures:
5. Axial and flexural behavior of structural elements:
6. Shear effects:
7. Connections
